## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 5 – 7, 18, 19, 21 – 24 and 27 - 35 (renumbered 1 – 18) are allowed.
2. The following is a statement of reasons for the indication of allowable subject matter:

The present invention of claims 5 – 7, 18, 19, 21 – 24 and 27 - 35 is directed to a reproducing apparatus and method includes a reproducing unit to reproduce mainstream data and sub audio data separately added in the mainstream data, wherein the reproducing unit comprises a counter used in reproducing the sub audio data.

Independent claim 5 identifies the unique distinct feature “a sub audio reproducing unit configured to reproduce sub audio data separately added into the mainstream data, using a sub audio arrival time clock which is configured to be used to depacketize the sub audio data and is independent of the mainstream arrival time clock and a sub audio system time clock which is configured to be used to decode the depacketized sub audio data and is independent of the mainstream system time clock.”

The closet prior art, Kato et al (US 2002/0145702) discloses a mainstream reproducing unit to reproduce mainstream data including still image data, using a mainstream arrival time clock which is used to depacketize the mainstream data and a mainstream system time clock which is used to decode the depacketized mainstream data (fig 96, paras 0435 to 0439 illustrates mainstream data depacketize

and decode). Yoo et al (US 7366396) discloses two clock counters in recording apparatus but not in reproducing apparatus. However Kato et al and Yoo et al fail to anticipate or render the above mentioned underlined limitations obvious.

Hence claim 5 is allowed.

Since claims 6 and 7 are dependent on claim 5, therefore they are also allowed.

Independent claim 18 identifies the unique distinct feature “a second reproducer configured to reproduce a second data stream based on second counters and the second counters comprise a second arrival time clock and second system time clock counter which are initialized based on program clock reference information in the first and second data.”

The closest prior art, Kato et al (US 2002/0145702) discloses a first reproducer reproducing a first data stream based on first counters wherein the first counters comprise a first a first system time clock counter (fig 96, paras 0435 to 0439 illustrates first system time clock counter). Yoo et al (US 7366396) discloses two clock counters in recording apparatus but not in reproducing apparatus. However Kato et al and Yoo et al fail to anticipate or render the above mentioned underlined limitations obvious.

Hence claim 18 is allowed.

Since claims 19, 21 – 24 and 27 - 30 depend on claim 18, therefore they are also allowed.

Independent claim 31 identifies the unique distinct feature “sub audio data, configured to be separately added in the mainstream data, in the form of data packets, configured to be reproduced using a sub audio arrival time clock which is configured to be used to depacketize the sub audio data and is independent of the mainstream arrival

Art Unit: 2621

time clock and a sub audio system time clock which is configured to be used to decode the depacketized sub audio data and is independent of the mainstream system time clock.”

Hence claim 31 is allowed.

Independent claims 32 identifies the unique distinct feature “a second data stream in the form of data packets configured to be reproduced based on second counters and the second counters comprise a second arrival time clock and second system time clock counter included in the reproducing apparatus which are configured to be initialized based on program clock reference information in the first and second data stream.”

Hence claim 32 is allowed.

Since claims 33 - 35 dependent on claim 32, therefore they are also allowed.

Hence claim 5 – 7, 18, 19, 21 – 24 and 27 - 35 are allowed over prior art.
